

Anurag Kumar Srivastava

Python Developer | Data Engineer | GenAI Engineer

Bhubaneswar, Odisha, India | anuragsrivastava3344@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Computer Science postgraduate focused on Python development, data engineering, and practical GenAI systems. Builds reliable REST APIs, analytical workflows, ETL-style data pipelines, relational database solutions, RAG applications, and AI-agent workflows, with hands-on experience deploying usable applications to the cloud.

TECHNICAL SKILLS

Programming: Python, SQL

Data Engineering: Pandas, NumPy, ETL and data pipelines, PostgreSQL, MySQL, SQLite, data cleaning, transformation, analysis, and visualization

GenAI: LLMs, RAG, LangChain, LangGraph, AI agents, embeddings, FAISS, vector databases, prompt engineering

Backend: FastAPI, Flask, REST APIs, data validation, CRUD workflows

Cloud and DevOps: AWS, Docker, Terraform, Git, GitHub Actions, CI/CD, Render

EDUCATION

Master of Computer Applications (MCA)

Academic Year: 2024 - 2026 | **CGPA:** 8.74

Technical focus: Python, data engineering, databases, cloud fundamentals, and applied AI systems.

Bachelor of Computer Applications (BCA)

Academic Year: 2021 - 2024 | **CGPA:** 7.67

Foundation in programming, database systems, software development, and computer applications.

PROJECT EXPERIENCE

Chicago Crime Analytics Platform | Python, Flask, Pandas, SQLite, REST APIs

[GitHub Repository](#) | [Live Demo](#)

- Turned raw Chicago crime records into accessible analytical dashboards and visual summaries, helping users identify patterns without working directly with source data.
- Centralized record access through Flask REST APIs and SQLite CRUD workflows, keeping analytical views and data operations consistent.
- Used Pandas-based cleaning and transformation workflows to prepare data for queries, summaries, and visual exploration.

ContextIQ RAG Application | Python, FastAPI, React, LangChain, FAISS, LLMs

[GitHub Repository](#) | [Live Demo](#)

- Improved answer relevance by grounding LLM responses in retrieved content from uploaded PDF, Markdown, and text documents.
- Implemented embedding-based search with LangChain and FAISS so users can receive context-aware answers instead of generic model responses.
- Connected a FastAPI service to a React interface for source-aware answers, summaries, and practice workflows, then published a public interactive demo.

TaskFlow | Python, Flask, SQLite, REST APIs

[GitHub Repository](#) | [Live Demo](#)

- Reduced task-tracking friction by combining creation, updates, search, filtering, sorting, and status management in one responsive workflow.
- Built a Flask REST API with SQLite persistence to keep task operations structured, reusable, and easy to validate.
- Added input validation and clear user feedback to make common task operations more dependable and understandable.

CERTIFICATION

AWS Cloud Practitioner Essentials - AWS
